Alfalfa Megabales is a source of vitamins and minerals with good palatability. It is mainly used for feeding small ruminants, pigs, horses, rabbits, birds and poultry. Besides supplying directly, balanced feed producers reprocessed Alfalfa Megabales in order to use it as one of the components for the manufacturing of other balanced feed. The Alfalfa Megabales process is made by grinding rolls of that pasture. Ground and dehydrated naturally at sun, Alfalfa goes through a compacting and pressing process whereby the finished product is obtained: Alfalfa Megabales of approx 900 Kg
